

The right hospital, right now, confirmed before you leave home.

The problem

Families rush to the *nearest* hospital, only to find no cardiologist on duty or no free ICU bed, and lose the golden hour travelling again. India recorded 1,68,491 road-accident deaths in 2022 (MoRTH).

Nearest ≠ capable

No live view of specialists, beds, equipment.

No trusted data

Status unpublished or outdated.

No acceptance

Refusals happen at the gate.

Panic & alone

Hard to type, call around, inform family.

Our solution: every step of our flowchart, working live

AI understands the emergency in Hindi / English / Hinglish → a deterministic engine matches staff-verified hospital capacity → the hospital accepts and prepares a bay → ambulance or own vehicle with live maps and a family tracking link.

HOW IT WORKS

From a spoken emergency to an accepted referral

Medreach

EN

Call 108

DEMO

Hospital data, hospital replies when no staff is logged in, SMS and ambulance dispatch are SIMULATED in this prototype.

2/8 - AI understands

Offline AI rules

confidence 97%

This description may indicate:

Heart attack / chest pain

CRITICAL

Hospital must have

24x7 Emergency

Cardiologist

ICU

This is not a diagnosis. Medreach coordinates emergency care – doctors decide treatment.

How was this decided?

1 - AI / NLP read the description (Offline AI rules)

2 - Extracted the requirements

Emergency type

Heart attack / chest pain

Severity

CRITICAL

Red flags

none

Age group

Elderly

Required capabilities

24x7 Emergency, Cardiologist, ICU

3 - A deterministic matching engine (no AI) applies them to staff-verified hospital data

4 - You get ranked, explained options – and a hospital must accept before you travel

4/8 - Hospitals

Hospitals that can treat this now

Govt / Ayushman only

Heart attack / chest pain

CRITICAL

Ranked by a deterministic engine from reported hospital data. A hospital must accept before you travel.

Bansal Hospital

Shahpura, Bhopal

Ask hospital to accept – Bansal Hospital

5/8 - Hospital confirms

Referral accepted by hospital

Bansal Hospital

Receiving bay Resus-02 is being prepared.

REPORTED CAPACITY

ICU: 3 beds reported

Verified 2 min ago - Simulated demo data

Reported by the hospital – not a guarantee of admission.

REFERRAL STATUS

ACCEPTED

by Emergency Desk Officer (Arun Chouhan) - 03:08 PM

CONFIRMED DESTINATION

Bansal Hospital

Receiving bay: Resus-02

03:08:32 PM Bansal Hospital ACCEPTED the referral by Emergency Desk Officer (Arun

5/8 - Hospital confirms

I'm-alone mode – everything is being done for you. Stay where you are, unlock the door if you can.

Location shared

Rahul (son) notified with live tracking link

Hospital request sent

Hospital accepted

Ambulance requested

Waiting for hospital to confirm...

Bansal Hospital

Alert with AI pre-arrival summary sent to Bansal Hospital's emergency desk.

REPORTED CAPACITY

EMERGENCY: 5 beds reported

Verified 3 min ago - Simulated demo data

Reported by the hospital – not a guarantee of admission.

AI: "may indicate heart attack", needs cardiologist + ICU

Only hospitals that can treat it now

Accepted by named officer, bay Resus-02

"I'm alone" mode does every step

Hospital reads the AI SBAR note and accepts with a bay

Live map: incoming ambulance and ETA

Capability-first

Specialist on duty + equipment working, then time to care.

Freshness

Every figure shows who / when; stale data never looks confirmed.

Auto fallback

Decline or 60 s silence → next hospital asked.

Safe AI

AI can only raise urgency; rules engine works offline.

Built, deployed and ready to pilot

All 7 technologies, working

Generative AI	Requirements + SBAR note (Claude)
Voice Bots	Speak Hindi / English; read-back
Computer Vision	Photo of injury → findings
OCR	Ayushman / ABHA card on phone
Predictive Analytics	ETA, bed-on-arrival, ER wait, forecast
Conversational AI	One follow-up question at a time
Mobile App	Offline, bilingual PWA

Privacy & security

Staff OTP login with roles · consent before sharing · masked IDs · audit log · deletion 24 h after hand-over · maps with no API keys.

Impact

- Social: right care the first time; equal access for rural, elderly and people alone
- Economic: no repeat trips; better use of ICU and specialists
- Governance: live, audited view of emergency capacity
- Hospitals: advance notice, fewer surprise arrivals

Roadmap

Prototype	Done: both portals live
Pilot · Bhopal	~3 months: onboard hospitals
Integrate	HFR, HMIS, 108 CAD, ABDM, SMS
Scale · MP	District-by-district rollout

Why Medreach should be selected

Real, urgent problem
Solves a life-or-death gap for citizens of Madhya Pradesh.

Working product
Deployed, both portals live, all 7 technologies, 51 tests.

Safe & honest
Explainable matching, privacy by design, simulated data labelled.

Ready to scale
Clear path to HFR, HMIS, 108 and ABDM integration.
